

AWS Cost Analysis

Account 767828750268

19 February 2026

Executive Summary

Metric	Value
Trailing 12-month spend	\$22,980
January 2026 actual	\$1,675
February 2026 forecast	\$2,065
Annualised run-rate	~\$24,780
Identified savings (Tiers 1+2)	\$697–767/mo (\$8,400–9,200/yr)
Identified savings (all tiers)	\$1,421–1,833/mo (\$17,100–22,000/yr)

1. Monthly Spend Trend

Month	Spend	Month	Spend
Feb 2025	\$832	Sep 2025	\$2,184
Mar 2025	\$908	Oct 2025	\$2,322
Apr 2025	\$929	Nov 2025	\$1,782
May 2025	\$2,016	Dec 2025	\$1,962
Jun 2025	\$2,502	Jan 2026	\$1,675
Jul 2025	\$2,854	Feb 2026 (fcst)	\$2,065
Aug 2025 (peak)	\$3,013		

Spend ramped sharply from Jan–Aug 2025 (\$269 to \$3,013), then partially scaled back. February 2026 is trending upward again, driven by the new EKS cluster for eve-horizon.

2. Resource Inventory

Resource	Count	Regions
EC2 instances	8 running, 1 stopped	us-west-2, eu-west-2, eu-west-1
ECS Fargate tasks	17 across 3 clusters	us-west-2
EKS cluster	1 (2 worker nodes)	eu-west-1
RDS instances	6 (all db.t3.micro Postgres)	us-west-2, eu-west-1
Load balancers	10 (9 ALB, 1 NLB)	us-west-2, eu-west-2, eu-west-1
NAT gateways	7	us-west-2 (6), eu-west-1 (1)
Elastic IPs	26 (5 idle)	us-west-2, eu-west-2, eu-west-1
Unattached EBS	2 volumes, 500 GB	eu-west-1

3. Cost Breakdown by Service

February 2026 projected monthly costs:

Service	Projected \$/mo	% of Total
EC2 Compute	\$705	34%
Tax	\$367	18%
ECS Fargate	\$290	14%
EC2 Other (EBS, NAT, IPs)	\$255	12%
CloudWatch	\$137	7%
ELB	\$138	7%
EKS	\$118	6%
VPC (Public IPv4)	\$106	5%
RDS	\$75	4%
Other (S3, ECR, Route53)	\$9	<1%

4. Cost by Project

Project	Feb Projected	% of Spend	Key Resources
(untagged)	\$1,464	67%	EC2 in eu-west-2, CloudWatch, shared infra
eve-horizon	\$238	11%	EKS, m6i.xlarge, NLB, 2x RDS, NAT
fanfair	\$235	11%	2 ECS clusters, 4 ALBs, 4 NATs, 3 RDS
Linguard + linguard	\$226	10%	1 ECS cluster, 2 ALBs, 2 NATs, 1 RDS, EC2
sri	\$30	1%	2 ALBs only (possibly dormant)
BNY	\$8	<1%	EC2 volume tag

67% of spend is untagged and cannot be attributed to a project.

5. Cost by Environment

Environment	Feb Projected	%
(untagged)	\$1,594	77%
staging	\$238	12%
sandbox	\$143	7%
qa	\$121	6%
qa-auto	\$103	5%
production	~\$0	0%

No tagged production workload exists. Either production runs outside this account, or production resources are hiding in the untagged 77%.

6. Key Findings

A. Over-provisioned EC2

Four instances averaging under 4% CPU utilisation:

Instance	Name	Type	CPU avg (7d)	Right-size to
i-0827352c409d5726d	influxdb pvs data analysis	t2.2xlarge	0.9%	t3.medium
i-0b40d783eef0eaf1c	bnv agentd	t2.xlarge	0.6%	t3.small
i-0a79fd99eb361528d	eve-staging-server	m6i.xlarge	3.8%	t3.medium
i-08f57e717062229b3	eh1-eks-agents	m5.xlarge	0.8%	t3.medium

B. Redundant Non-production Infrastructure

- **6 NAT gateways** in us-west-2 for sandbox/QA environments, deployed in dual-AZ pairs
- **8 ALBs** in us-west-2 with separate internal + external ALBs per environment
- Sandbox and QA workloads do not require multi-AZ redundancy

C. Waste

- 2 unattached 250 GB EBS volumes (“ollama models”) in eu-west-1 costing ~\$40/mo
- 5 idle Elastic IPs across regions costing ~\$18/mo
- sri project has 2 ALBs (\$32/mo) but no visible compute

D. Tagging Gaps

- 67% of spend has no **Project** tag
- 77% of spend has no **Environment** tag
- **Linguard** vs **linguard** case inconsistency splits cost reporting
- **Component** tag covers less than 1% of spend

E. Legacy Instance Types

Four instances still running previous-generation **t2** instance types, which are more expensive and lack unlimited burstable credits compared to t3.

7. EC2 Instance Detail

Name	Type	Region	State	CPU avg	CPU max	Est. \$/mo
influxdb pvs data analysis	t2.2xlarge	eu-west-2	running	0.9%	3.7%	\$276
i5 build server	t2.xlarge	eu-west-2	running	11.2%	84.2%	\$137
bnv agentd	t2.xlarge	us-west-2	running	0.6%	1.4%	\$121
eve- staging- server	m6i.xlarge	eu-west-1	running	3.8%	29.5%	\$140
eh1-eks- agents	m5.xlarge	eu-west-1	running	0.8%	25.5%	\$140
eh1-eks- default	t3.large	eu-west-1	running	6.5%	99.5%	\$56
docbuddy	t3.small	us-west-2	running	0.5%	74.1%	\$15
Lili's server	t3.micro	eu-west-2	running	0.7%	6.3%	\$8
i5 debian server	t2.xlarge	eu-west-2	stopped	—	—	\$0

8. ECS Fargate Detail

All clusters in us-west-2. All services running 1 task each on Fargate.

fanfair-qa cluster (8 services, ~\$143/mo)

Service	CPU (units)	Memory (MB)
fanfair-qa-fanfair	1024	2048
fanfair-qa-kong	512	1024
fanfair-qa-supabase-auth	512	1024
fanfair-qa-reporting	512	1024
fanfair-qa-propay-simulator	512	1024
fanfair-qa-kompliant-simulator	512	1024
fanfair-qa-payment	256	512
fanfair-qa-ops	256	512

fanfair-qa-auto cluster (6 services, ~\$107/mo)

Service	CPU (units)	Memory (MB)
fanfair-qa-auto-quarkus-api	1024	2048
fanfair-qa-auto-kong	512	1024
fanfair-qa-auto-supabase-auth	512	1024

Service	CPU (units)	Memory (MB)
fanfair-qa-auto-propay-simulator	512	1024
fanfair-qa-auto-ops	256	512
fanfair-qa-auto-inbucket	256	512

linguard-sandbox cluster (3 services, ~\$69/mo)

Service	CPU (units)	Memory (MB)
linguard-sandbox-quarkus-api	1024	2048
linguard-sandbox-kong	512	1024
linguard-sandbox-supabase-auth	512	1024

Total Fargate: 9 vCPU, 18 GB, ~\$319/mo – all non-production workloads.

9. RDS Instance Detail

Instance	Engine	Class	Storage	Project	Env	CPU avg	Conns avg
fanfair-qa-db	PG 14.17	db.t3.micro	20 GB gp3	fanfair	qa	7.3%	4
fanfair-qa-auto-db	PG 14.17	db.t3.micro	20 GB gp3	fanfair	qa-auto	7.4%	2
fanfair-qa-reporting-db	PG 14.17	db.t3.micro	20 GB gp3	fanfair	qa	6.3%	2
linguard-sandbox-db	PG 14.17	db.t3.micro	20 GB gp2	linguard	sandbox	6.9%	2
eh1-postgres	PG 15.14	db.t3.micro	20 GB gp3	eve-horizon	staging	5.6%	19
eve-staging-postgres	PG 15.14	db.t3.micro	20 GB gp3	eve-horizon	staging	5.8%	5

All instances are right-sized at db.t3.micro (~\$12.50/mo each). **Total RDS: ~\$75/mo.**

Notes: linguard-sandbox-db is on legacy gp2 storage. Postgres 14.17 instances should be upgraded before EOL.

10. Load Balancers (10 total, ~\$160/mo)

Name	Type	Region	Project	Environment
qa-fanfair-ext-alb	ALB	us-west-2	fanfair	qa
qa-fanfair-int-alb	ALB	us-west-2	fanfair	qa
qa-a-fanfair-ext-alb	ALB	us-west-2	fanfair	qa-auto
qa-a-fanfair-int-alb	ALB	us-west-2	fanfair	qa-auto
sand-linguard-ext-alb	ALB	us-west-2	linguard	sandbox
sand-linguard-int-alb	ALB	us-west-2	linguard	sandbox
sand-sri-ext-alb	ALB	us-west-2	sri	sandbox
sand-sri-int-alb	ALB	us-west-2	sri	sandbox
lb	ALB	eu-west-2	(none)	(none)
k8s ingress NLB	NLB	eu-west-1	eve-horizon	staging

11. NAT Gateways (7 total, ~\$224/mo)

Name	Region	Project	Environment
fanfair-qa-nat-us-west-2a	us-west-2	fanfair	qa
fanfair-qa-nat-us-west-2b	us-west-2	fanfair	qa
fanfair-qa-auto-nat-us-west-2a	us-west-2	fanfair	qa-auto
fanfair-qa-auto-nat-us-west-2b	us-west-2	fanfair	qa-auto
linguard-sandbox-nat-us-west-2a	us-west-2	linguard	sandbox
linguard-sandbox-nat-us-west-2b	us-west-2	linguard	sandbox
eh1-nat	eu-west-1	eve-horizon	staging

12. Savings Recommendations

Tier 1 – Quick Wins

#	Action	Savings/mo	Effort
1	Delete 2 unattached EBS volumes (eh1-ollama-models, eve-staging-ollama-models)	\$40	5 min
2	Release 5 idle Elastic IPs	\$18	5 min
3	Migrate t2 instances to t3/t3a equivalents	\$50–100	1 hr each
4	Fix Linguard/linguard tag inconsistency	\$0	10 min
5	Tag all untagged resources	\$0	2–4 hrs
Tier 1 subtotal		\$108–158	

Tier 2 – Right-sizing

#	Action	Savings/mo	Effort
6	Downsize influxdb t2.2xlarge to t3.medium	\$240	1 hr
7	Downsize bny agentd t2.xlarge to t3.small	\$105	1 hr
8	Downsize eve-staging m6i.xlarge to t3.medium	\$107	1 hr
9	Downsize eh1-eks-agents m5.xlarge to t3.medium	\$107	30 min
10	Audit CloudWatch custom metrics (280+)	\$30–50	2 hrs
Tier 2 subtotal		\$589–609	

Tier 3 – Architecture Optimisation

#	Action	Savings/mo	Effort
11	Reduce NAT gateways: 1 per non-prod env (6 to 3)	\$96	Terraform
12	Consolidate ALBs with host-based routing	\$64–96	Terraform
13	Schedule fanfair-qa-auto to scale-to-zero outside hours	\$70–90	Scheduled scaling
14	Tear down sri ALBs if project is dormant	\$32	Verify + terraform
15	Delete duplicate eve-staging-postgres if eh1-postgres is primary	\$12	Verify
16	Add VPC endpoints to reduce NAT data charges	\$20–40	Terraform
Tier 3 subtotal		\$294–366	

Tier 4 – Strategic

#	Action	Savings/mo	Effort
17	Compute Savings Plan (1yr no-upfront)	\$200–350	Purchase
18	Fargate Spot for non-critical tasks	\$30–50	Task def change
19	Shut down all non-prod outside business hours	\$200–300	Lambda + EventBridge
	Tier 4 subtotal	\$430–700	

13. Savings Summary

Tier	Description	Monthly Savings	Annual Savings
1	Quick wins	\$108–158	\$1,300–1,900
2	Right-sizing	\$589–609	\$7,100–7,300
3	Architecture	\$294–366	\$3,500–4,400
4	Strategic	\$430–700	\$5,200–8,400
1+2	Low-risk, high-impact	\$697–767	\$8,400–9,200
All	Full optimisation	\$1,421–1,833	\$17,100–22,000

At current projected spend of ~\$2,065/mo (\$24,780/yr):

- **Tiers 1+2 alone would reduce spend by ~35%** to ~\$1,300/mo
- **All tiers combined would reduce spend by ~70%** to ~\$600/mo

14. Recommended Next Steps

1. **This week:** Execute Tier 1 – delete orphaned EBS volumes, release idle Elastic IPs, fix tags
2. **Next 2 weeks:** Right-size the 4 over-provisioned EC2 instances (Tier 2, items 6–9)
3. **This month:** Implement tagging policy, consolidate NAT gateways, audit CloudWatch metrics
4. **Next quarter:** Evaluate Savings Plans once spend is stabilised post-optimisation

Report generated 19 February 2026 using AWS Cost Explorer and CloudWatch metrics via AWS CLI.
